

Full Stack development assignment

Problem statement:

Build a basic **Employee Management mobile application** using MEAN, MERN or any other full stack with CRUD features:

- Add Employee
- List Employee
- Update Employee
- Delete Employee
- View Employee

References:

1. UI view of Employee list

Employee Management App

Employees List

Add Employee

Employee First Name	Employee Last Name	Employee Email Id	Actions
Ramesh	Fadatare	ram@gmail.com	<div>UpdateDeleteView</div>
John	Cena	john@gmail.com	<div>UpdateDeleteView</div>
Tom	Cruise	tom@gmail.com	<div>UpdateDeleteView</div>
Admin	admin	admin@gmail.com	<div>UpdateDeleteView</div>

2. Employees record to have - First name, Last name, Employee ID (5 digit random number), Email ID, Contact number (10 digit number)

3. You can make other necessary assumptions regarding choice of DB, UI look and feel or anything else

What is expected:

1. Write the code and upload it your github repository (public) and share the link.

2. 1 pager report on the overall design and assumptions
3. If possible, create a small demo of the application, upload it and share
